Hallclip®

Save time installing step flashings with the Hallclip®

Helpful pointers when using the Hallclip®

When you use Hallclips to fix flashings you can dress them before pointing them in. Insert Hallclips with 'H' uppermost.

One pack fixes up to 20 linear metres of flashing.

When fixing step flashings ensure that at least one clip is fitted per step.

When working in narrow joints (engineering brick), using a hammer, tap the Hallclip® to lessen the angle, and install using a paint scraper / putty knife so as not to trap the tool.

Invented by a working
roofer, save both time
and money
